Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

## Application No. Applicant(s) 10/764,218 DURHAM ET AL. Office Action Summary Examiner Art Unit Abdou Karim Seve 2194 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 18 November 2009. 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-26 is/are pending in the application. 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration. 5) Claim(s) \_\_\_\_\_ is/are allowed. 6) Claim(s) 1-26 is/are rejected. 7) Claim(s) \_\_\_\_\_ is/are objected to. 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) ☐ The drawing(s) filed on 23 January 2004 and 11 September 2008 is/are: a) ☐ accepted or b) ☐ objected to by the Examiner Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some \* c) None of: Certified copies of the priority documents have been received. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). \* See the attached detailed Office action for a list of the certified copies not received. Attachment(s) 1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413) Paper No(s)/Mail Date. Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) Notice of Informal Patent Application

Paper No(s)/Mail Date

3) Information Disclosure Statement(s) (PTO/SB/08)

6) Other:

Claims 1-26 are pending in this application.

### Response to Arguments

2. In the remarks applicant argue in substance that :

The reference cited failed to teach or suggest "sorting at leat some of the first captured data events with respect to at least some of the second capture data events according to...respective clock timestamps associated with each of the first and second captured data events".

Examiner respectfully disagreed with applicant's remark.

Anderson teaches sorting at least some of the first captured data events with respect to at least some of the second captured data events according to the respective clock timestamps associated with each of the first and second captured data events (FIG. 21; wherein each row "5-12" include to a data event associated with a date/time stamp; col. 30, lines 20-24; wherein the claimed element " events sorted and displayed with timestamps" of Anderson's reference meets the claimed limitation of the claim). Therefore these teaching of Anderson suggest "sorting at least some of the first captured data events with respect to at least some of the second captured data events according to the respective clock timestamps associated with each of the first and

Art Unit: 2194

second captured data events" Examiner has cited particular columns and line numbers and/or figures in the references as applied to the claims for the convenience of the applicant. Applicant is reminded that rejections are based on references as a whole and not just the cited passages. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant, in preparing the responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the cited art or disclosed by the examiner.

#### Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103 (a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/764,218

Art Unit: 2194

4. Claims 9-26, are rejected under 35 U.S.C. 103 (a) as unpatentable over Anderson et al. (US 5850388) in view of Vaglica et al (US 6125404), and further in view of Hrischuk et al. (USPGPUB 2002/0194393).

 As to claim 15, Anderson teaches the invention substantially as claimed including a method for processing data events associated with a multi-protocol communications system (abstract; FIG. 20), the method being suitable for use in connection with a multilink protocol analyzer (col. 3, lines 2-15) and comprising:

capturing first data events (col. 4, lines 50-52; wherein time event is the data capture; FIG. 2; FIG. 21) at a first link analyzer (col. 4, line 50; wherein the protocol analyzer is the link analyzer; 304, FIG. 3; col. 9, lines 15-20), the first link analyzer being disposed in an in-line arrangement with respect to a first data stream (col. 4, lines 59-63; wherein the data packets includes data stream; FIG. 3; col. 9, lines 15-18) corresponding to a first communication protocol (col. 4, lines 60-62; 703, FIG.1; col. 17, lines 5-7);

capturing second data events (FIG. 21; wherein the event field include a second captured data events) at a second link analyzer (col. 3; lines 7-16; wherein LAN and WAN network are known to include a second link analyzer), the second link analyzer being disposed in an in-line arrangement with respect to a second data stream (col.6, lines 1-20) corresponding to a second communication protocol (708B,FIG. 7; col. 17, lines 10-13; wherein other/next protocol is the second communication protocol) that is different from the first communication protocol (col. 17, lines 1-23):

sorting at least some of the first captured data events with respect to at least some of the second captured data events according to the respective clock timestamps associated with each of the first and second captured data events (FIG. 21; wherein each row 5-12 include to a data event associated with a date/time stamp; col. 30, lines 20-24; "event sorted and displayed with timestamps).

Filling a display with at least some of sorted data event (col 4, lines 65-67; col. 5, lines 1-10) and

displaying at least some of the sorted data events by way of a graphical user interface (FIG. 18; col. 4, lines 65-67; col. 5, lines 1-17; col. 30, lines 20-25).

- 5. Anderson does not explicitly teach timestamping each of the captured first and second data events in association with a clock, and a temporal relationship between at least two of the displayed data events is apparent from the display.
- Vaglica teaches timestamping first and second data events (col. 2, lines 3-4; FIG.
  wherein "event 1.....event N" include first and second event) in association with a reference time / clock (18, FIG. 1; col. 4, lines 27-52).
- Hrischuk teaches a temporal relationship between data events (paragraph 202;
  211).

Art Unit: 2194

7. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teachings of Anderson, Vaglica and Hrischuk, because the timestamping of first and second data events with a reference time/ clock of Vaglica and providing temporal relationship between data event of Hrischuk will improve the efficiency of Anderson's system by allowing sorting of the data events according to the respective clock timestamps associated with each of the first and second captured data events in order to increase control of timing of events, software errors and reducing interrupt latencies.

- 8. As to claims 9 and 21, they are rejected for the same reasons as claim 15 above.
- As to claims 10, 16 and 22, Anderson teaches, wherein the displayed data events represent at least two different communication protocols selected from the group consisting of: Infiniband; Gigabit Ethernet; SONET; Fibre Channel; and, PCI Express (col. 2, lines 10-13; col. 1, lines 34-38).

.

 As to claims 11, 17 and 23, Vaglica teaches, wherein the clock timestamp is based upon one of: a reference clock; and, a protocol clock (18, FIG. 1; FIG. 2); Art Unit: 2194

11. As to claims 12, 18 and 24, Hrischuk teaches, wherein the temporal relationship comprises comprise at least one of the following: a first data event preceded a second data event; a first data event followed a second data event; a first data event overlapped a second data event; and, a first data event and second data event commenced simultaneously and also concluded simultaneously (paragraph 211, 247).

- 12. As to claims 13, 19 and 25, Hrischuk teaches, determining whether a causal relationship exists between at least two displayed data events based upon the temporal relation between the at least two displayed data events (paragraph 289)
- 13. As to claims 14, 20 and 26, Anderson teaches, wherein the displayed information includes at least one of: a data event start time; a data event stop time; a data event delta time; a data event type; an analyzer port in connection with which a data event was captured; a timestamp value; and, a protocol type (FIG. 21).
- Claims 1-4 and 8, are rejected under 35 U.S.C. 103 (a) as unpatentable over Anderson et al. (US 5850388) in view of Vaglica et al (US 6125404).
- 15. As to claim 1,Anderson teaches the invention substantially as claimed including a method for processing data events captured in a multi-protocol communications system (abstract: FIG. 20), the method comorising:

Application/Control Number: 10/764.218 Art Unit: 2194

capturing first data events (col. 4, lines 50-52; wherein time event is the data capture: FIG. 2: FIG. 21) at a first link analyzer (col. 4, line 50; wherein the protocol analyzer is the link analyzer; 304, FIG. 3; col. 9, lines 15-20 ), the first link analyzer being disposed in an in-line arrangement with respect to a first data stream (col. 4, lines 59-63; wherein the data packets includes data stream; FIG. 3; col. 9, lines 15-18) corresponding to a first communication protocol (col. 4, lines 60-62; 703, FIG.1; col. 17, lines 5-7):

capturing second data events (FIG. 21; wherein the event field include a second captured data events) at a second link analyzer (col. 3: lines 7-16; wherein LAN and WAN network are known to include a second link analyzer), the second link analyzer being disposed in an in-line arrangement with respect to a second data stream (col.6. lines 1-20) corresponding to a second communication protocol (708B,FIG. 7; col. 17, lines 10-13; wherein other/next protocol is the second communication protocol) that is different from the first communication protocol (col. 17, lines 1-23):

accessing the captured first and second data events (col. 5, lines 1-17);

sorting at least some of the first captured data events with respect to at least some of the second captured data events according to the respective clock timestamps associated with each of the first and second captured data events (FIG. 21; wherein each row 5-12 include to a data event associated with a date/time stamp: col. 30, lines 20-24; "events sorted and displayed with timestamps); and

displaying at least some of the sorted data events by way of a graphical user interface (FIG. 21; FIG. 18; col. 4, lines 65-67; col. 5, lines 1-17; col. 30, lines 20-24).

- 16. Anderson does not explicitly teach that each of the captured first and second data events having an associated clock timestamp.
- 17. Vaglica teaches timestamping first and second data events (col. 2, lines 3-4; FIG.
  4; wherein "event 1.....event N" include first and second event) in association with a reference time / clock (18, FIG. 1; col. 4, lines 27-52).
- 18. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Anderson's invention with Vaglica's to include timestamping of the first and second data events with a reference time/ clock, because it will improve the efficiency of Anderson's system by allowing sorting of the data events according to the respective clock timestamps associated with each of the first and second captured data events in order to increase control of timing of events, software errors and reducing interrupt latencies.
- As to claim 2, Anderson teaches, wherein the displayed data events represent at least the first and second communication protocols (FIG. 5; col. 9, lines 15-30).
- 20. As to claim 3, it is rejected for the same reasons as claim 10 above.

Art Unit: 2194

21. As to claim 4, it is rejected for the same reasons as claim 11 above.

- 22. As to claim 8, it is rejected for the same reasons as claim 14 above.
- 23. Claims 5-7 are rejected under 35 U.S.C. 103 (a) as unpatentable over Anderson et al. (US 5850388) in view of Vaglica et al (US 6125404), and further in view of Hrischuk et al. (USPGPUB 2002/0194393).
- 24. As to claim 5, Anderson and Vaglica failed to teach wherein a temporal relationship between at least two of the displayed data events is apparent from the display. Hrischuk teaches a temporal relationship between data events (paragraph 202; 211). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teachings of Anderson, Vaglica and Hrischuk, because providing temporal relationship between data events of Hrischuk will improve the efficiency of Anderson's system by providing information sufficient for determining scenario causality from a distributed application's execution history in order to increase models/systems performance.
- 25. As to claim 6, it is rejected for the same reasons as claim 12 above.

Art Unit: 2194

26. As to claim 7, it is rejected for the same reasons as claim 13 above.

#### Conclusion

 THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

31 Any inquiry concerning this communication or earlier communications from the examiner should be directed to Abdou Karim Seye whose telephone number is 571-270-1062. The examiner can normally be reached on Monday - Friday 8:30 - 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sough Hyung can be reached on (571)272-6799. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
